CareCentrix

Optima Health has contracted with CareCentrix to manage the infusion therapy needs of our members who need independent home infusion therapy (HIT) effective July 1, 2022. The CareCentrix HIT product includes the provision of drug, nursing, and functions to support infusion therapy in the home. As a reminder, durable medical equipment (DME) home care nursing is not in scope for this program. This applies to independent HIT and ambulatory infusion suite (AIS) providers and does not impact hospital-affiliated/owned HIT or AIS providers.

CareCentrix offers many benefits such as limited contact if a member is immunocompromised, convenience, and the comfort of knowing that infusion therapy can be done at home. The process for requesting prior authorization will not change. The provider network and the claims submitted by HIT providers will be managed by CareCentrix.

CareCentrix may call members to arrange in-home infusion therapy for eligible drugs they are currently receiving in an ambulatory infusion center, outpatient hospital facility, or doctor's office for the Site-of-Care Redirection program. Optima Health will manage the Transition of Care program for members who have a non-CareCentrix HIT provider and will attempt to get the member to use a CareCentrix HIT provider. Both programs are voluntary. The partnership with CareCentrix is designed to cause no disruption to the member and will greatly enhance the member's experience with Optima Health.

Datapoint Employer Reporting Tool

At Optima Health, our mission is to continuously work to improve our initiatives to meet your needs. Datapoint is our employer reporting tool for employer groups that have 100+ members that provides customized reports and dashboards. It is an intuitive experience with easy automation and timely information for benefit administrators, designated consultants, and brokers.

We have DataPoint learning resources available for you to leverage on the optimahealth.com/needtoknow webpage. Some of these resources include: DataPoint Reference Guide: Top 10 Reports and Dashboards, Report Crosswalk, and DataPoint Learning Roadmap; followed by multiple learning resources such as user guides and videos.

We are currently offering a training series to guide you through the sequence of learning content from beginner to expert for the DataPoint tool. Join us for our upcoming training session on September 20 from 10:00 a.m. - 10:30 a.m. Please check out optimahealth.com/needtoknow for the DataPoint – How to become an expert: Learning Roadmap series. You do not have to register. Simply click “Join Session” on the applicable day.

Machine-Readable Files Now Available

The machine-readable file (MRF) requirement under the Transparency in Coverage (TiC) rules went into effect July 1, 2022. This part of the rule requires that insurers and self-funded group health plans must begin to publicly post machine-readable files with detailed information on the costs of covered services and prescription drugs.

The page hosting the required files in JSON format is available on our [website](#). The Centers for Medicare & Medicaid Services (CMS) has posted [additional technical information](#). To learn more about MRF data and access, you can review our [frequently asked questions](#).

Please contact your Optima Health representative if you have any questions.

Employer News

Exciting Vendor Changes

Optima Health continuously looks for ways to improve benefits, services, and cost efficiencies for its employer groups and members. As a result of these efforts, we have made the strategic decision to change our pharmacy benefit manager (PBM) from OptumRx® to Express Scripts (ESI) and our vision services vendor from Eyemed to VSP Vision Care (VSP) for all lines of business, effective January 1, 2023 (regardless of the group's effective date).

You and your employees will experience little to no disruption in services with these new partnerships. Members can expect the following:

- Seamless transition
- No changes to copayment or cost-share amounts
- Active pharmacy pre-authorizations automatically transferred
- New Optima Health member ID cards issued prior to January 1, 2023

We will share more detailed information about these exciting new partnerships and their valuable impact to you and your employees over the next several months.

If you have any questions, please contact your broker or Optima Health representative.

Well-Child Visits and Recommended Vaccinations

Many children and adolescents missed check-ups and recommended childhood vaccinations during the past two years. Children who are not protected by vaccines are more likely to get diseases like measles and whooping cough. These diseases are extremely contagious and can be very serious, especially for babies and young children.

In recent years, there have been outbreaks of these diseases, especially in communities with low vaccination rates. Now it is time to make sure that your child sees their doctor for well-child visits and recommended vaccines. It is one of the best things you can do to protect your child and community from serious diseases that are easily spread!

Well-child visits are essential for many reasons, including:

- tracking growth and developmental milestones (e.g., body mass index (BMI), nutrition, and physical activity)
- discussing any concerns about your child's health
- getting scheduled vaccinations to prevent illnesses like measles, whooping cough (pertussis), and [other serious diseases](#)

Back to School Safety

As students go back to school, it is important that they eat healthy, stay active, and are up to date on their immunizations for a healthier and safer school year.

Eat Healthy and Stay Active

The health of students—what they eat and how much physical activity they get—is linked to their academic success. Early research is also starting to show that healthy school lunches may help to lower obesity rates. Health and academics are linked – so time spent for health is also time spent for learning. The Dietary Guidelines for Americans recommend that children and adolescents limit their intake of solid fats, cholesterol, sodium, added sugars, and refined grains. Eating a healthy breakfast is associated with improved cognitive function. Young people aged 6-17 should participate in at least 60 minutes of physical activity every day. Research shows that physical activity can help cognitive skills, attitudes, concentration, attention, and improve classroom behavior – so students are ready to learn.

Get Vaccinated

Getting your children and teens ready to go back to school is the perfect time to make sure they are up to date with their immunizations. Vaccination protects students from diseases and keeps them healthy. The recommended immunizations for children birth through six years old can be found [here](#).

The recommended immunizations for preteens and teens 7-18 years old can be found [here](#).

Back to School Safety (Continued)

Heads Up: Concussions

Every year, United States emergency departments treat an estimated 173,285 sports–and recreation–related traumatic brain injuries, or TBIs, including concussions, among children and teens, from birth to 19 years. A concussion is a type of TBI, caused by a bump, blow, or jolt to the head that can change the way your brain normally works. Concussions can also occur from a fall or a blow to the body that causes the head and brain to move quickly back and forth.

Children and teens are more likely to get a concussion and take longer to recover than adults. Concussion symptoms may appear mild, but the injury can lead to problems affecting how a person thinks, learns, acts, and/or feels.

Concussions can occur during any sport or recreational activity, so all parents need to learn the signs and know what to do if a concussion occurs with the **ABC's** of concussions: **A**ssess the situation, **B**e alert for signs and symptoms, and **C**ontact a healthcare professional.

Lung Cancer Screening

WHY SCREEN FOR LUNG CANCER?

Lung cancer is the #1 cause of cancer-related deaths in the United States and is responsible for more deaths annually than breast, prostate, and colorectal cancers combined. In a landmark national study, the National Lung Screening Trial (NLST) sponsored by the National Cancer Institute, has indicated that screening with low-dose CT scans can help find lung cancers early, leading to a higher cure rate. Diagnosing lung cancer at an early stage, before the cancer has spread, increases a patient's chance of successful treatment and survival.

WHAT IS LUNG CANCER SCREENING?

Lung cancer screening is a low-dose CT scan (computed tomography) which is a type of imaging. The scan covers the entire chest and provides a more detailed look than a standard chest x-ray. The exam takes about 15 minutes in total, with the actual scan lasting only five to ten seconds.

WHO SHOULD GET A LOW-DOSE CT LUNG SCREENING EXAM?

Medicare and the US Preventative Task Force (USPTF) recommend low-dose CT lung screening for high-risk patients as defined below. Those who have symptoms of a lung condition at the time of screening, such as a new cough or shortness of breath, are not eligible.

- Medicare: 50-77 years old with 20 pack year smoking history and is a current smoker or has quit within the last 15 years
- USPTF: 50-80 years old with 20 pack year smoking history and is a current smoker or has quit within the last 15 years

WHY SHOULD I CHOOSE SENTARA FOR MY LOW-DOSE CT LUNG SCREENING?

The CT lung screening program is part of the nationally accredited Sentara Cancer Network, which includes multidisciplinary physician teams and measurable quality outcomes. The program consists of:

- A CT Lung Screening Navigator who will work with your physician to coordinate follow-up recommendations and care.
- A standardized classification system to provide your referring physician with clear, concise

Member News

Lung Cancer Screening (*Continued*)

recommendations for potential follow-up care needed.

- The most advanced technologies, like navigational bronchoscopy and endobronchial ultrasound, to assist in diagnosing any abnormalities found on the low-dose CT scan.
- Multidisciplinary team approach with interventional radiologists, pulmonologists, thoracic surgeons, pathologists, radiation and medical oncologists in the Sentara Cancer Network who work together to develop a comprehensive treatment plan specialized for you.

I THINK I QUALIFY FOR LOW-DOSE CT LUNG SCREENING. WHAT SHOULD I DO NEXT?

Discuss CT lung screening with your healthcare provider to determine if the screening is right for you. For any additional questions, contact the CT Lung Screening Navigator at 1-855-EARLY-DX (1-855-327-5939).

NOTE: Eligibility criteria may vary depending on your insurance plan.

At-Home Colorectal Cancer Screening

Colorectal cancer (cancer of the lower colon or rectum) is the third most common cancer diagnosed in both men and women in the United States. One of three national “hot spots” where colorectal cancer deaths remain high—largely due to low screening rates—is in Virginia. As a result, Optima Health has partnered with BiolQ® to encourage members over age 45 to complete the at-home fecal immunochemical test (FIT) kit. The FIT kit can help detect precancerous polyps that can lead to cancer. Optima Health is sending free FIT kits to members who either meet screening criteria, may be overdue for colorectal cancer screening, signed up by phone/website, or their employer opted into the program. If a test kit has been mailed to you, please remember that it must be completed within 14 days and returned in the postage-paid envelope located inside the kit.

If you have questions about colorectal cancer screenings, please talk with your primary care physician, visit our website at optimahealth.com/colonfacts, or leave a message with the Optima Health Population Care department at 757-687-6334. A nurse will return your call within 48 hours.

Gym Discounts

As an Optima Health member, you have access to exclusive savings through GlobalFit’s Gym Network 360.

- get discounts on big box gyms, specialty studios, and virtual fitness programs
- enjoy exclusive rates on nutrition, weight loss and healthy eating programs
- stay motivated with other tools and resources, including monthly promotions for more savings

Get Ready for Flu Season

Optima Health would like to remind our members to get an annual flu shot. The annual flu shot is a way to protect you from catching the seasonal flu. The Centers for Disease Control and Prevention (CDC) recommends that everyone six months and older should get an annual flu vaccine, ideally by the end of October.

Seasonal flu and COVID-19 are both contagious respiratory illnesses with similar symptoms, but they are caused by different viruses. Optima Health recommends that you protect yourself from these viruses. It is acceptable for you to be given the flu vaccine and COVID-19 vaccine at the same time. Both vaccines are covered by Optima Health for members.

Members can visit the following locations to get a flu shot:

- your physician's office
- your local pharmacy

* *Fluzone*® high-dose and *FluMist*® influenza vaccines are not covered for all ages. Adjuvant influenza vaccines are not covered for members age 64 and younger. Please see your doctor or pharmacy for information on receiving the flu vaccine.

Sentara Board of Directors Announces Next President and CEO

After a thorough national search and vetting numerous highly qualified applicants, the Sentara Healthcare Board of Directors has confirmed the selection of Dennis Matheis to succeed Howard Kern as the health system's President and Chief Executive Officer. Kern announced his retirement earlier this year following more than 40 years of service to the organization. Matheis will assume the role of President and CEO on September 1, 2022.

Matheis, who has served as President of Sentara Health Plans and an Executive Vice President at Sentara Healthcare since 2018, has spent the past 30 years in senior leadership roles within the healthcare industry, including health care financing and delivery. Bringing his experience and customer-focus to Sentara, Matheis led the technology modernization of Sentara Health Plans to provide new digital tools to members, the implementation of innovative models of care with provider partners, and the joint ownership transaction of Virginia Premier with VCU Health System.

As Sentara's new President and CEO, Matheis will lead implementation of the health system's strategic priorities and continue to build upon the strong quality, safety and financial foundation established during Kern's tenure as part of the organization's commitment to creating exceptional consumer value. "I am humbled and excited by the opportunity to serve this great organization as its next President and CEO. The depth of talent and experience of our leaders and team members throughout Sentara is extraordinary. Witnessing firsthand the sacrifice and dedication exhibited by physicians, nurses and all team members in our hospitals and clinics throughout the pandemic was truly inspiring and I look forward to working more closely with them. We will continue our tradition of delivering industry-leading quality outcomes while positioning Sentara for success in a rapidly evolving health care landscape."

Dennis Matheis and his wife, Vickie, have been married for 41 years and have three children and four grandchildren. They have embraced all that the Hampton Roads, Virginia community has to offer over the past four and a half years and consider it their forever home. Matheis is an avid reader and loves to be on the water.
